

DOAC

Dabigatran (Pradaxa®)

Rivaroxaban (Xarelto®)

Apixaban (Eliquis®)

Edoxaban (Lixiana®)

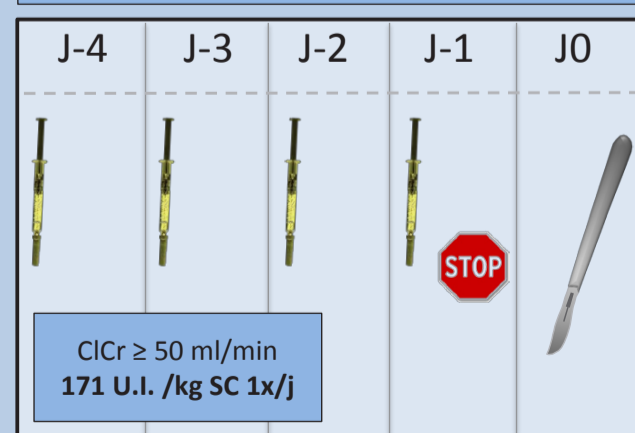

AVK

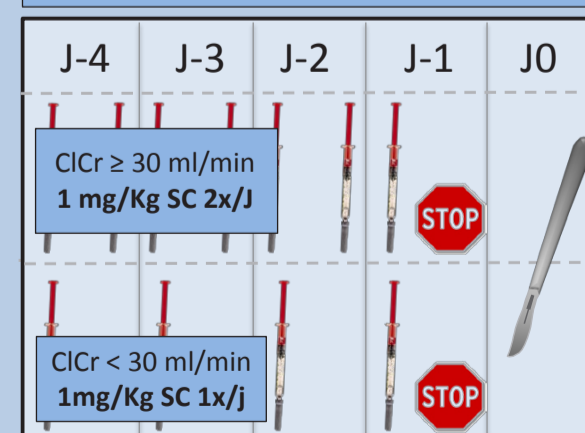

Héparines de bas poids moléculaire (HBPM); dosage thérapeutique

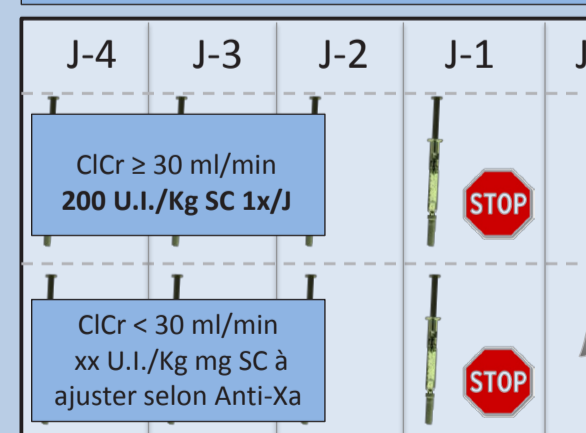

Nadroparine (Fraxiparine®)

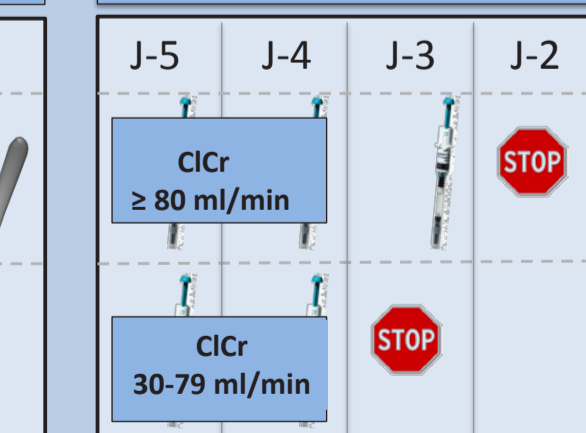

Enoxaparine (Clexane®)

Daltéparine (Fragmin®)

Fondaparinux (Arixtra®)

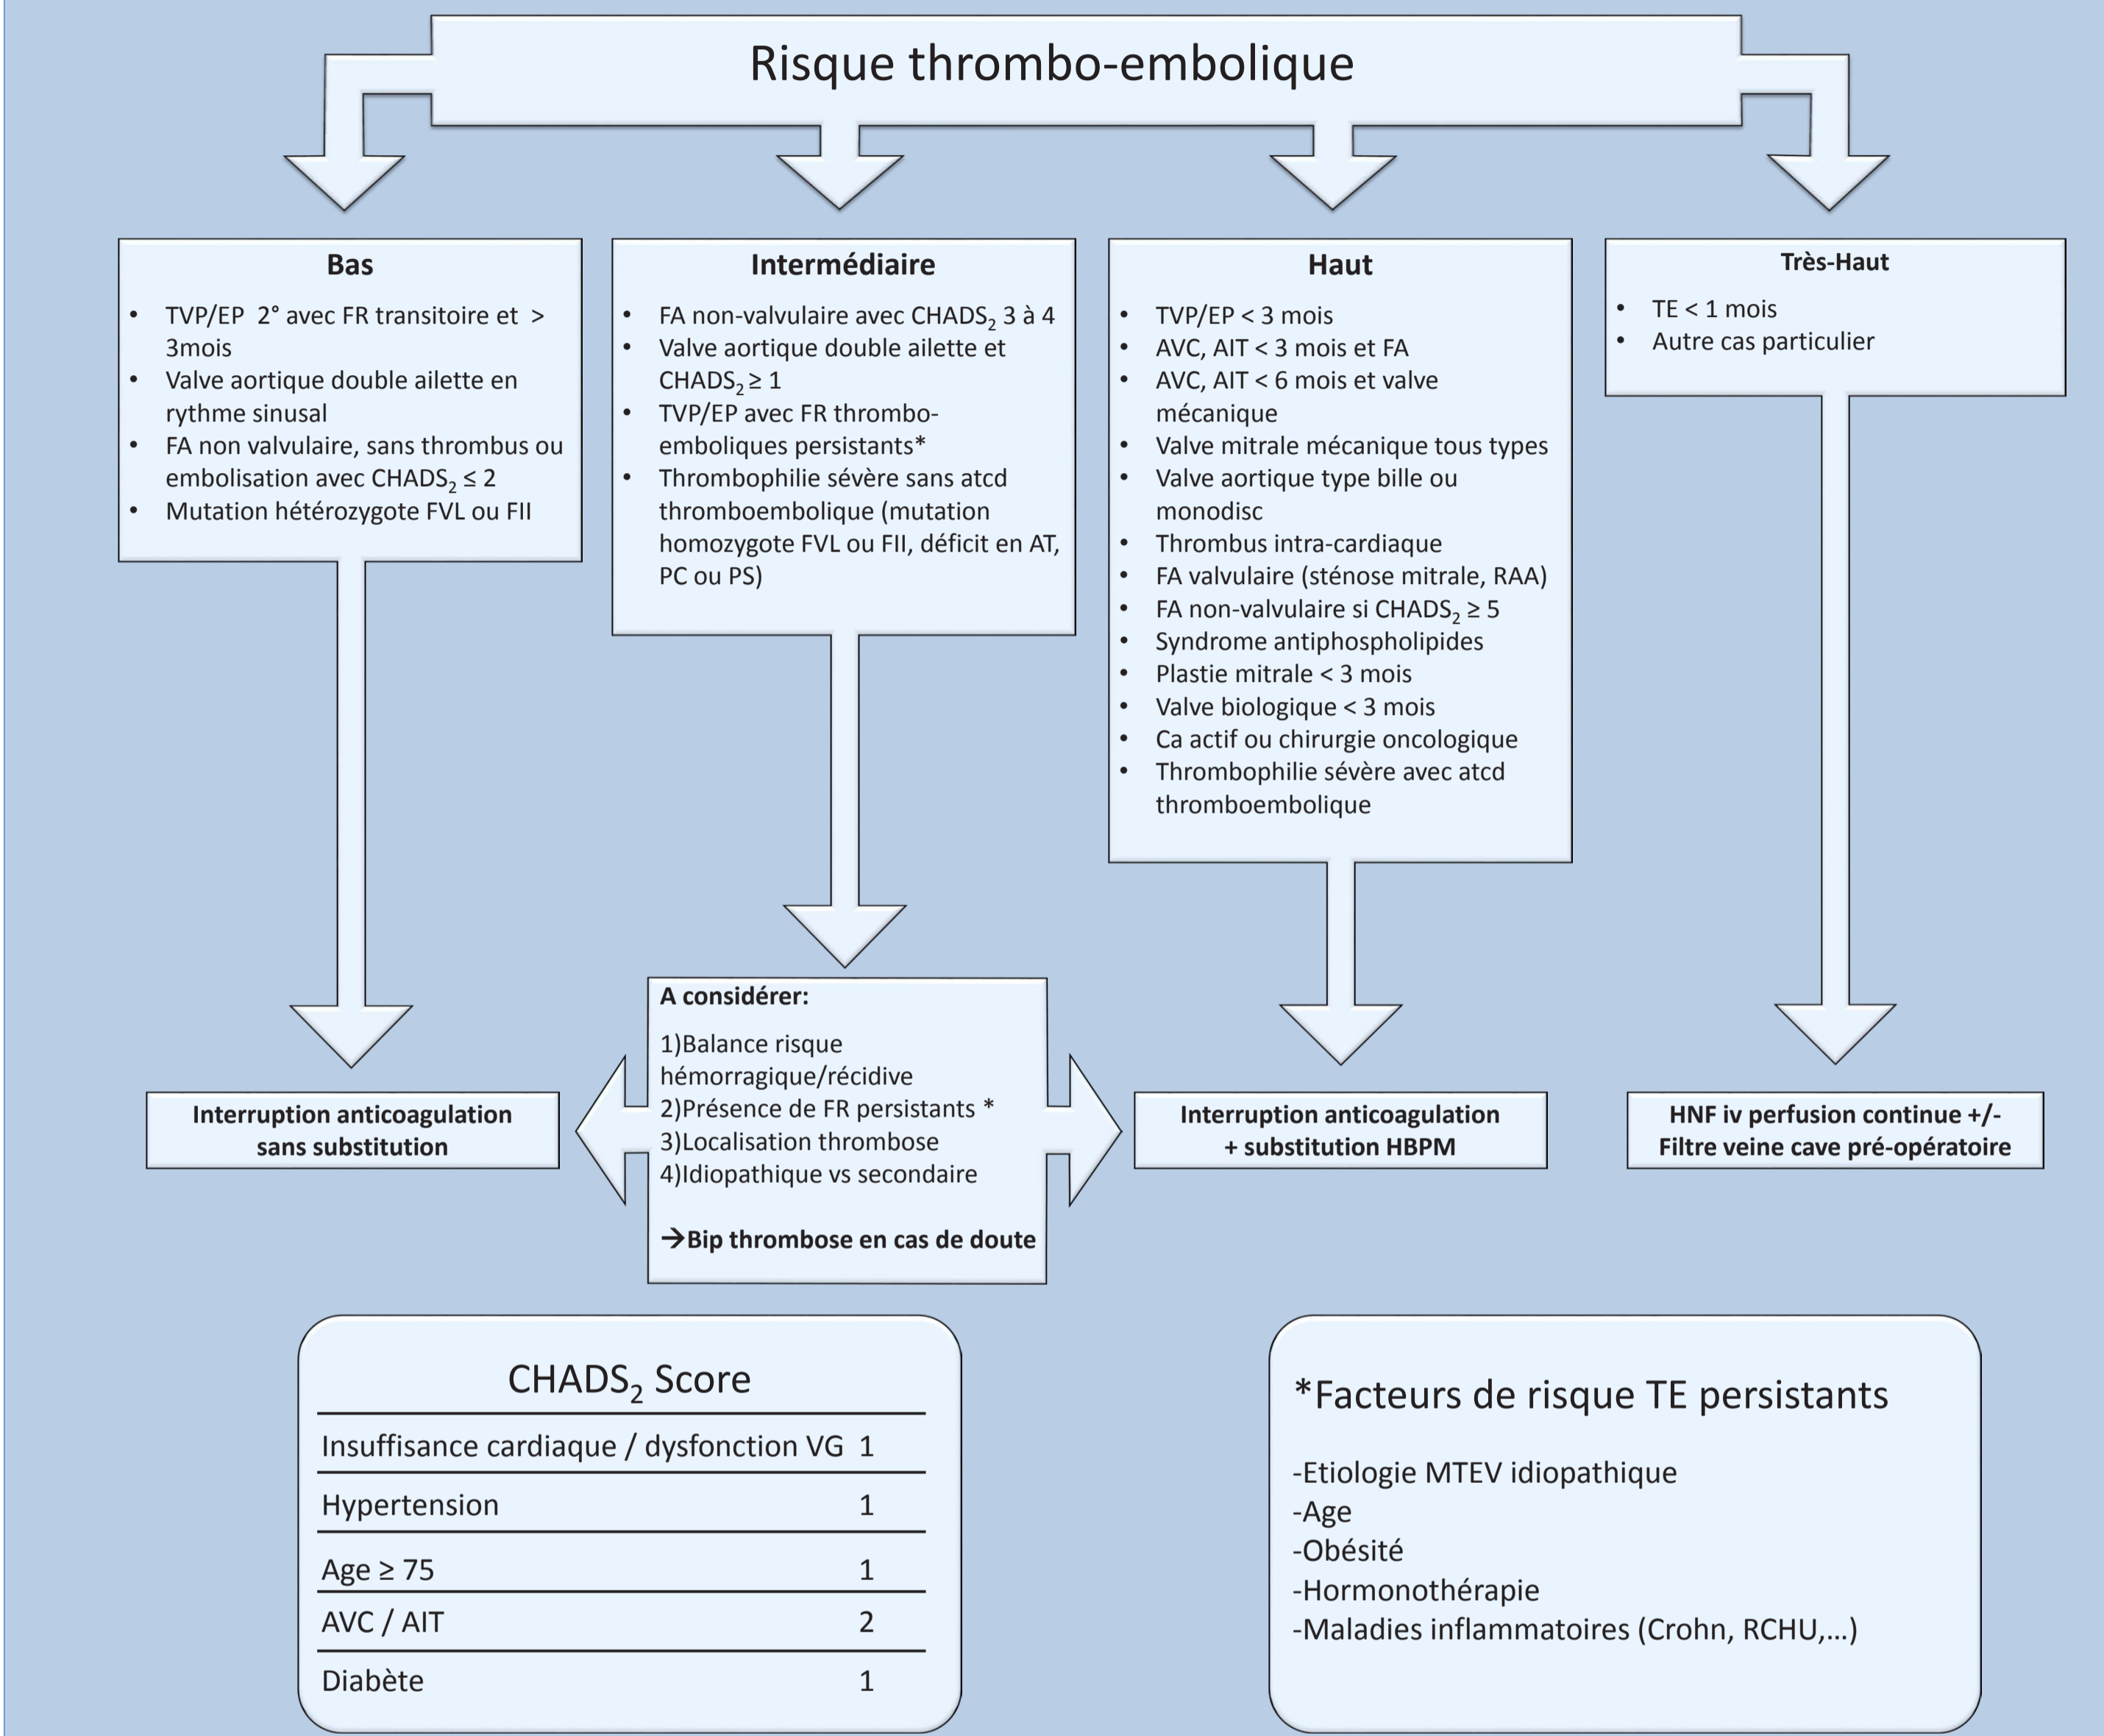

● Dosage thérapeutique d'HBPM ou liqémine iv continu selon risque hémorragique

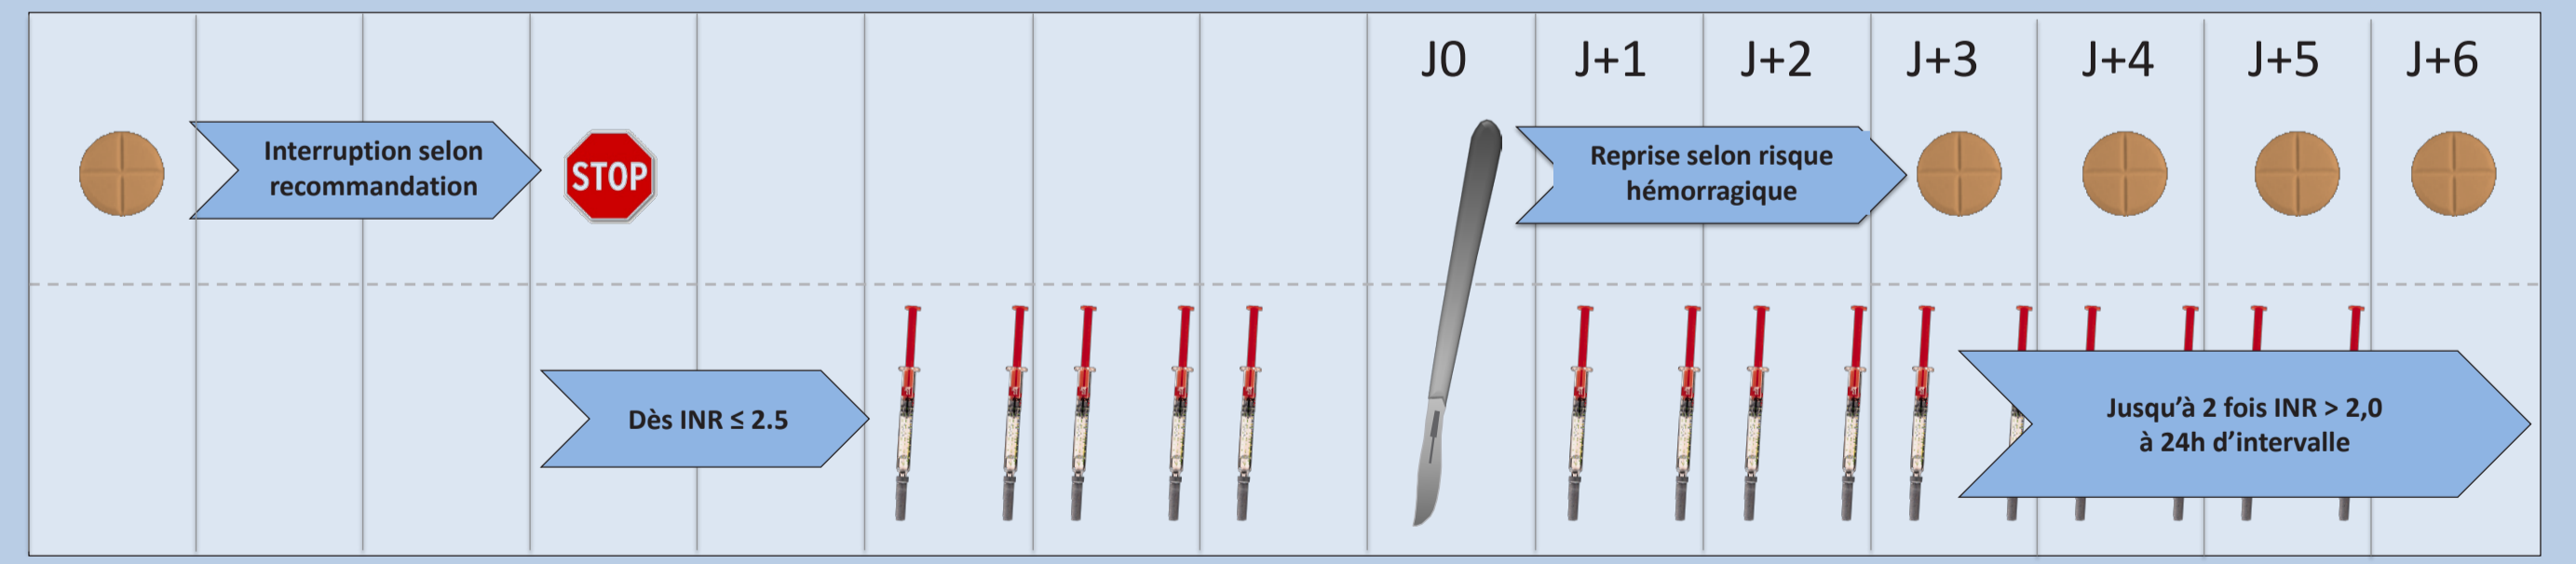

STOP Risque hémorragique élevé et intermédiaire ou non-acceptable (SNC/œil)

● Risque hémorragique faible

Algorithme de substitution

Substitution Anti Vitamine K

Substitution DOAC

Pas de substitution des DOAC sauf en cas de très haut risque thrombo-embolique → Bip Thrombose / hospitalisation / liqémine iv
